NEUROBIOLOGY OF AGING

VOLUME 1 1980

SUBJECT INDEX

Acetylcholine
  aging, 13, 21
  choline chloride, 21
  glutamate, 13
  memory, 13, 21
  neurotransmitter receptors, 13
  passive avoidance, 13
Adrenergic nerve terminals
  aging, 65
  norepinephrine, 65
  uptake, 65
Aged animals
  ^{3}H-amphetamine, 93
  drug effects, 93
Aged primates
  arecoline, 145
  choline, 145
  cholinomimetics, 145
  memory, 145
  physostigmine, 145
Aging
  acetylcholine, 13, 21
  adrenergic nerve terminals, 65
  amino acids, 81
  amphetamine, 119
  arcuate nucleus, 27
  blood pressure, 157
  cardiovascular collapse, 157
  catecholamines, 157
  cellular changes, 45
  central fever controls, 175
  choline acetyltransferase, 59
  choline chloride, 21
  cholinergic system, 39, 59
  cognitive impairment, 127
  cognitive loss, 45
  conditioned flavor aversion, 53
  corticosterone, 157
  depression, 111
  dichotic listening, 39
  L-DOPA, 119
  dopamine, 27
  electrophysiology, 111
  fever, 175
  glucose utilization, 127
  glutamate, 13
  glutamic acid decarboxylase, 59
  histofluorescence, 27
  immunocytochemistry, 27
  LHRH, 27
  locomotor activity, 59
  magnitude estimation, 81
  median eminence, 27
  memory, 13, 21, 39
  monkey brain, 45
  multimodal sensory regions, 45
  neurotransmitter receptors, 13
  norepinephrine, 65
  passive avoidance, 13, 59
  positron emission tomography, 127
  pyrogens, 175
  receptor binding, 59
  rotation, 119
  scopolamine, 39
  senile dementia, 127
  somatostatin, 27
  squirrel monkey, 175
  stress, 157
  striatum, 119
  taste, 81
  uptake, 65
  vasopressin, 53
  visual event-related potentials, 111
Aging rodent brain
  astrocyte population, 169
  cell separation, 169
  diatrizoate gradients, 169
  GFAP immunofluorescence, 169
Alzheimer's disease
  brain atrophy, 69
  cognitive deficits, 69
  cognitive status, 165
  computed tomography, 69
  duration of illness, 165
  immunoglobulins, 165
  senile dementia, 69
Amino acids
  aging, 81
  magnitude estimation, 81
  taste, 81
Amphetamine
  aging, 119
  L-DOPA, 119
  rotation, 119
  striatum, 119
^{3}H-Amphetamine
  aged animals, 93
  drug effects, 93
Anatomy
  cerebellum, 3
  electrophysiology, 3
  neurobiological model system, 3
  Purkinje cell, 3
  senescent changes, 3
Arcuate nucleus
  aging, 27
  dopamine, 27
  histofluorescence, 27
  immunocytochemistry, 27
  LHRH, 27
  median eminence, 27
  somatostatin, 27
Arecoline
  aged primates, 145
  choline, 145
  cholinomimetics, 145
  memory, 145
  physostigmine, 145
Astrocyte population
  aging rodent brain, 169
  cell separation, 169
  diatrizoate gradients, 169
  GFAP immunofluorescence, 169

Blood pressure
  aging, 157
  cardiovascular collapse, 157
  catecholamines, 157
  corticosterone, 157
  stress, 157
Brain
  arcuate nucleus, 27
  cerebellum, 3
  hypothalamus, 153
  median eminence, 27
  pituitary, 153
  striatum, 119
Brain atrophy
  Alzheimer's disease, 69
  cognitive deficits, 69
  computed tomography, 69
  senile dementia, 69
Brain metabolism
  aging, 127
  cognitive impairment, 127
  glucose utilization, 127
  positron emission tomography, 127
  senile dementia, 127

Cardiovascular collapse
  aging, 157
  blood pressure, 157
  catecholamines, 157
  corticosterone, 157
  stress, 157

Catecholamines
aging, 157
blood pressure, 157
cardiovascular collapse, 157
corticosterone, 157
stress, 157
Cell separation
aging rodent brain, 169
astrocyte population, 169
diatrizoate gradients, 169
GFAP immunofluorescence, 169
Cellular changes
aging, 45
cognitive loss, 45
monkey brain, 45
multimodal sensory regions, 45
Central fever controls
aging, 175
fever, 175
pyrogens, 175
squirrel monkey, 175
Cerebellum
anatomy, 3
electrophysiology, 3
neurobiological model system, 3
Purkinje cell, 3
senescent changes, 3
Choline
aged primates, 145
arecoline, 145
cholinomimetics, 145
memory, 145
physostigmine, 145
Choline acetyltransferase
aging, 59
cholenergic system, 59
glutamic acid decarboxylase, 59
locomotor activity, 59
passive avoidance, 59
receptor binding, 59
Choline chloride
acetylcholine, 21
aging, 21
memory, 21
Cholinergic system
aging, 39, 59
choline acetyltransferase, 59
dichotic listening, 39
glutamic acid decarboxylase, 59
locomotor activity, 59
memory, 39
passive avoidance, 59
receptor binding, 59
scopolamine, 39
Cholinomimetics
aged primates, 145
arecoline, 145
choline, 145
memory, 145
physostigmine, 145
Cognitive deficits
Alzheimer's disease, 69
brain atrophy, 69
computed tomography, 69
senile dementia, 69
Cognitive impairment
aging, 127
brain metabolism, 127
glucose utilization, 127
positron emission tomography, 127
senile dementia, 127
Cognitive loss
aging, 45
cellular changes, 45
monkey brain, 45
multimodal sensory regions, 45
Cognitive status
Alzheimer's disease, 165
duration of illness, 165
immunoglobulins, 165
Computed tomography
Alzheimer's disease, 69
brain atrophy, 69
cognitive deficits, 69
senile dementia, 69
Conditioned flavor aversion
aging, 53
vasopressin, 53
Corticosterone
aging, 157
blood pressure, 157
cardiovascular collapse, 157
catecholamines, 157
stress, 157

Depression
aging, 111
electrophysiology, 111
visual event-related potentials, 111
Diatrizoate gradients
aging rodent brain, 169
astrocyte population, 169
cell separation, 169
GFAP immunofluorescence, 169
Dichotic listening
aging, 39
cholinergic system, 39
memory, 39
scopolamine, 39
L-DOPA
aging, 119
amphetamine, 119
rotation, 119
striatum, 119
Dopamine
aging, 27
arcuate nucleus, 27
histofluorescence, 27
immunocytochemistry, 27
LHRH, 27
median eminence, 27
somatostatin, 27
Drug
amphetamine, 93, 119
arecoline, 145
choline, 145
choline chloride, 21
L-DOPA, 119
physostigmine, 145
scopolamine, 39
Drug effects
aged animals, 93
^{3}H-amphetamine, 93
Duration of illness
Alzheimer's disease, 165
cognitive status, 165
immunoglobulins, 165
Electrophysiology
aging, 111
anatomy, 3
cerebellum, 3
depression, 111
neurobiological model system, 3
Purkinje cell, 3
senescent changes, 3
visual event-related potentials, 111
Enkephalin
hypothalamus, 153
pituitary, 153
radioimmunoassay, 153
reproductive senility, 153
Estradiol
LH, 141
positive feedback, 141
progesterone, 141
prolactin, 141

Fever
aging, 175
central fever controls, 175
pyrogens, 175
squirrel monkey, 175
Foveal cone density
retina, 133
visual acuity, 133

GFAP immunofluorescence
aging rodent brain, 169
astrocyte population, 169
cell separation, 169
diatrizoate gradients, 169
Glucose utilization
aging, 127
brain metabolism, 127
cognitive impairment, 127
positron emission tomography, 127
senile dementia, 127
Glutamate
acetylcholine, 13
aging, 13
memory, 13
neurotransmitter receptors, 13
passive avoidance, 13
Glutamic acid decarboxylase
aging, 59
choline acetyltransferase, 59
cholinergic system, 59
locomotor activity, 59
passive avoidance, 59
receptor binding, 59

Histofluorescence
aging, 27
arcuate nucleus, 27
dopamine, 27
immunocytochemistry, 27
LHRH, 27
median eminence, 27
somatostatin, 27
Hormone
corticosterone, 157
estradiol, 141
LH, 141
LHRH, 27
progesterone, 141
prolactin, 141
somatostatin, 27
vasopressin, 53
Hypothalamus
enkephalin, 153
pituitary, 153
radioimmunoassay, 153
reproductive senility, 153

Immunocytochemistry
aging, 27
arcuate nucleus, 27
dopamine, 27
histofluorescence, 27
LHRH, 27
median eminence, 27
somatostatin, 27
Immunoglobulins
Alzheimer's disease, 165
cognitive status, 165
duration of illness, 165

LH
estradiol, 141
positive feedback, 141
progesterone, 141
prolactin, 141
LHRH
aging, 27
arcuate nucleus, 27
dopamine, 27
histofluorescence, 27
immunocytochemistry, 27
median eminence, 27
somatostatin, 27
Locomotor activity
aging, 59
choline acetyltransferase, 59
cholinergic system, 59
glutamic acid decarboxylase, 59
passive avoidance, 59
receptor binding, 59

Magnitude estimation
aging, 81
amino acids, 81
taste, 81
Median eminence
aging, 27
arcuate nucleus, 27
dopamine, 27
histofluorescence, 27
immunocytochemistry, 27
LHRH, 27
somatostatin, 27
Memory
acetylcholine, 13, 21
aged primates, 145
aging, 13, 21, 39
arecoline, 145
choline, 145
choline chloride, 21
cholinergic system, 39
cholinomimetics, 145
dichotic listening, 39
glutamate, 13
neurotransmitter receptors, 13
passive avoidance, 13
physostigmine, 145
scopolamine, 39
Method
histofluorescence, 27
immunocytochemistry, 27
immunofluorescence, 169
radioimmunoassay, 153
Monkey brain
aging, 45
cellular changes, 45
cognitive loss, 45
multimodal sensory regions, 45

Multimodal sensory regions
aging, 45
cellular changes, 45
cognitive loss, 45
monkey brain, 45

Neurobiological model system
anatomy, 3
cerebellum, 3
electrophysiology, 3
Purkinje cell, 3
senescent changes, 3
Neurotransmitter receptors
acetylcholine, 13
aging, 13
glutamate, 13
memory, 13
passive avoidance, 13
Norepinephrine
adrenergic nerve terminals, 65
aging, 65
uptake, 65

Passive avoidance
acetylcholine, 13
aging, 13, 59
choline acetyltransferase, 59
cholinergic system, 59
glutamate, 13
glutamic acid decarboxylase, 59
locomotor activity, 59
memory, 13
neurotransmitter receptors, 13
receptor binding, 59
Physostigmine
aged primates, 145
arecoline, 145
choline, 145
cholinomimetics, 145
memory, 145
Pituitary
enkephalin, 153
hypothalamus, 153
radioimmunoassay, 153
reproductive senility, 153
Positive feedback
estradiol, 141
LH, 141
progesterone, 141
prolactin, 141
Positron emission tomography
aging, 127
brain metabolism, 127
cognitive impairment, 127
glucose utilization, 127
senile dementia, 127
Progesterone
estradiol, 141
LH, 141
positive feedback, 141
prolactin, 141
Prolactin
estradiol, 141
LH, 141
positive feedback, 141
progesterone, 141
Purkinje cell
anatomy, 3
cerebellum, 3
electrophysiology, 3
neurobiological model system, 3
senescent changes, 3
Pyrogens
aging, 175
central fever controls, 175
fever, 175
squirrel monkey, 175

Radioimmunoassay
enkephalin, 153
hypothalamus, 153
pituitary, 153
reproductive senility, 153
Receptor binding
aging, 59
choline acetyltransferase, 59
cholinergic system, 59
glutamic acid decarboxylase, 59
locomotor activity, 59
passive avoidance, 59
Reproductive senility
enkephalin, 153
hypothalamus, 153
pituitary, 153
radioimmunoassay, 153
Retina
foveal cone density, 133
visual acuity, 133
Rotation
aging, 119
amphetamine, 119
L-DOPA, 119
striatum, 119

Scopolamine
aging, 39
cholinergic system, 39
dichotic listening, 39
memory, 39
Senescent changes
anatomy, 3
cerebellum, 3
electrophysiology, 3
neurobiological model system, 3
Purkinje cells, 3
Senile dementia
aging, 127
Alzheimer's disease, 69
brain atrophy, 69
brain metabolism, 127
cognitive deficits, 69
cognitive impairment, 127
computed tomography, 69
glucose utilization, 127
positron emission tomography, 127
Somatostatin
aging, 127
arcuate nucleus, 27
dopamine, 27
histofluorescence, 27
immunocytochemistry, 27
LHRH, 27
median eminence, 27
Squirrel monkey
aging, 175
central fever controls, 175
fever, 175
pyrogens, 175

Stress
aging, 157
blood pressure, 157
cardiovascular collapse, 157
catecholamines, 157
corticosterone, 157
Striatum
aging, 119
amphetamine, 119
L-DOPA, 119
rotation, 119

Taste
aging, 81
amino acids, 81
magnitude estimation, 81

Uptake
adrenergic nerve terminals, 65
aging, 65
norepinephrine, 65

Vasopressin
aging, 53
conditioned flavor aversion, 53
Visual acuity
foveal cone density, 133
retina, 133
Visual event-related potentials
aging, 111
depression, 111
electrophysiology, 111
